PROFESSIONAL SUMMARY

Backend Software Engineer with 1+ years of experience designing, developing, and deploying scalable backend systems using Python, Django, and Django REST Framework. Experienced in building secure RESTful APIs with JWT authentication, RBAC-based authorization, and modular architecture for enterprise-grade applications.

Strong understanding of system design fundamentals, database optimization, caching strategies (Redis), and distributed backend concepts. Skilled in Docker-based containerization, CI/CD pipeline integration, and cloud deployment workflows using AWS services.

Proficient in Agile development, SDLC practices, and production-grade debugging, testing, and performance optimization. Passionate about building highly scalable, secure, and maintainable backend systems optimized for high traffic and real-world production use cases.

TECHNICAL SKILLS

Backend Development

Python, Django, Django REST Framework, RESTful APIs, Microservices Architecture

System Design & Architecture

System Design Fundamentals, Scalable Backend Systems, Low-Level Design, High-Level Design, Distributed Systems Basics

Authentication & Security

JWT Authentication, Role-Based Access Control (RBAC), Secure API Design, OWASP Best Practices

Databases & Caching

MySQL, MongoDB, Database Design, Query Optimization, Indexing, **Redis (Caching Strategies)**

DevOps & Cloud

Docker, CI/CD Pipelines (GitHub Actions basics), AWS (EC2, S3, RDS - conceptual/learning), Linux Deployment Basics

Tools & Workflow

Git, GitHub, Jira, Agile, SDLC, Postman, API Testing

Performance & Engineering Concepts

Backend Optimization, Scalability, Load Handling Concepts, Asynchronous Processing (basic), System Debugging

Frontend (Basic)

React.js, HTML5, CSS3

PROFESSIONAL EXPERIENCE

Software Engineer

Ziva Medico Pvt Ltd | Kathmandu, Nepal
Feb 2024 – Present

- Designed and deployed scalable Django-based backend systems handling business-critical operations, improving API efficiency, maintainability, and system reliability across production modules.
- Developed and maintained RESTful APIs using Django REST Framework for enterprise-level application features and third-party integrations.
- Implemented secure authentication and authorization architecture using JWT and RBAC, ensuring controlled access across multi-role enterprise system modules.
- Engineered modular CRUD systems for content and user management, improving code reusability and enabling scalable feature expansion across backend services.
- Optimized complex SQL queries, indexing strategies, and database schema design, improving backend performance and reducing API response latency.
- Introduced structured debugging and testing practices, reducing production bugs by 15% and improving system stability.
- Worked in Agile environment using Git/GitHub workflows with feature branching, code reviews, and CI-ready development practices.
- Contributed to SDLC including development, testing, deployment, and production maintenance cycles.
- Assisted in backend architecture improvements aligned with scalability and maintainability principles.
- Exposure to containerization concepts using Docker and deployment workflows aligned with CI/CD pipelines.

PROJECTS

E-Commerce Backend API (Django REST Framework)

GitHub: https://github.com/nikesh1-asus/E-Commerce-Site.git

Tech Stack: Python, Django, DRF, MySQL, Docker (basic), Git

- Built a scalable backend system supporting product management, user authentication, cart, and order processing modules.

- Designed RESTful APIs with clean architecture and modular service separation for scalability and maintainability.
- Implemented JWT authentication and role-based access control for secure multi-user system access.
- Optimized database schema design and relationships to ensure data integrity and fast query performance.
- Introduced caching strategy concept (Redis-ready architecture) to improve scalability under high traffic conditions.
- Structured system with future-ready CI/CD and Docker containerization compatibility.

Blog Management System (Django)

GitHub: **https://github.com/nikesh1-asus/Django-Blog.git**

Tech Stack: Python, Django, DRF, MySQL, Git

- Developed a role-based content management system with Admin, Editor, Author, and Manager roles using RBAC principles.
- Engineered modular CRUD architecture improving scalability and maintainability across content workflows.
- Implemented search, pagination, and media handling to enhance system usability and performance.
- Customized Django admin dashboard with analytics-like views for content monitoring and management.
- Optimized database queries and backend logic for improved response time and reduced redundancy.
- Designed system with distributed backend thinking, enabling future migration to microservices architecture.

EDUCATION

BSc (Hons) Computer Systems Engineering (First Class Honors)
University of Sunderland (via ISMT), Kathmandu, Nepal
Oct 2019 – Nov 2023

Relevant Coursework: Software Engineering, System Design Fundamentals, Database Systems, Web Development, Programming

---

CODING PLATFORMS

- Leetcode: 150+ problems solved
- GeeksforGeeks: 100+ problems solved

LANGUAGES

- Nepali – Native
- English – Fluent
- Hindi – Conversational
- Bhojpuri – Conversational
