PROFESSIONAL SUMMARY

Backend-focused Software Developer with 1+ years of professional experience building production Python/Django systems, underpinned by a First-Class Honours degree in Computer Systems Engineering. Strong foundation in RESTful API development, SQL database design and query optimization, secure authentication (JWT/RBAC), and clean, well-tested code across the full SDLC. Experienced working within a small, agile engineering team collaborating on code reviews, structured debugging, and documentation — and comfortable communicating clearly with technical and non-technical stakeholders across multilingual environments. A fast, self-directed learner (250+ problems solved across Leetcode and GeeksforGeeks) looking to deepen expertise in GraphQL, asynchronous task processing, and large-scale domain modelling within a mission-driven engineering organisations.

TECHNICAL SKILLS

- **Programming & Fundamentals:** Python, Django, Django REST Framework, Object-Oriented Programming, Data Structures & Algorithms, RESTful APIs
- **Databases:** MySQL, MongoDB, SQL Query Optimization, Indexing, Database Design, Redis (Caching)
- **Auth & Security:** JWT Authentication, Role-Based Access Control (RBAC), Secure API Design, OWASP Best Practices
- **DevOps & Cloud:** Docker, CI/CD (GitHub Actions), AWS (EC2, S3, RDS), Linux Deployment
- **System Design:** Scalable Backend Systems, Microservices Architecture, Distributed Systems Fundamentals
- **Frontend (Working Knowledge):** React.js, JavaScript, HTML5, CSS3
- **Tools & Workflow:** Git, GitHub, Jira, Agile/SDLC, Postman, API Testing

PROFESSIONAL EXPERIENCE

Software Engineer | Ziva Medico Pvt Ltd

July 2024 – Present

Kathmandu, Nepal

- **Designed and deployed scalable Django-based backend systems** for business-critical operations, improving API efficiency, maintainability, and reliability across production modules.
- Built and maintained RESTful APIs using Django REST Framework to power enterprise application features and third-party integrations.
- **Optimized complex SQL queries, indexing strategies, and database schema design** in MySQL, reducing API response latency and strengthening database fundamentals applicable across relational systems (transferable to PostgreSQL).
- Implemented secure authentication and authorization using JWT and RBAC, enforcing controlled access across multi-role enterprise modules.
- Engineered modular CRUD systems for content and user management, improving code reusability and enabling scalable feature expansion.
- **Introduced structured debugging and testing practices** that reduced production bugs by 15% and improved system stability writing unit and integration tests covering happy-path, boundary, and exceptional scenarios.
- Wrote clear technical documentation for new and existing features to support teammates and non-technical stakeholders.
- **Collaborated closely within a small, agile engineering team** using Git/GitHub workflows with feature branching, code reviews, and CI-ready development practices contributing across the full SDLC from development through production maintenance.
- Worked with Docker-based containerization concepts and deployment workflows aligned with CI/CD pipelines.

PROJECTS

E-Commerce Backend API (Django REST Framework)

Tech Stack: Python, Django, DRF, MySQL, Docker, Git

- Built a scalable backend supporting product management, user authentication, cart, and order processing modules.
- Designed RESTful APIs with clean, modular service separation for scalability and maintainability.
- Implemented JWT authentication and role-based access control for secure multi-user access.
- **Optimized database schema and relationships** to ensure data integrity and fast query performance.
- Designed a Redis-ready caching layer to improve scalability under high-traffic conditions.

Blog Management System

Tech Stack: Python, Django, DRF, MySQL, Git

- Developed a role-based content management system with Admin, Editor, Author, and Manager roles using RBAC principles.
- Built a modular CRUD architecture that improved scalability and maintainability across content workflows.
- Implemented search, pagination, and media handling to improve system usability and performance.
- **Optimized database queries** and backend logic to improve response time and reduce redundancy.
- Designed with distributed-systems thinking in mind, enabling a future migration path to microservices, domain modelling, and event-driven architectures.

EDUCATION

BSc (Hons) Computer Systems Engineering: First Class Honours

University of Sunderland (UK), delivered via ISMT, Kathmandu, Nepal | Oct 2019 – Nov 2023

Relevant Coursework: Software Engineering, System Design Fundamentals, Database Systems, Web Development, Programming, Data Structures & Algorithms

ADDITIONAL INFORMATION

- **Coding Practice:** Leetcode (150+ problems solved), GeeksforGeeks (100+ problems solved) self-directed practice in algorithms and problem solving.
- **Side Projects:** Personal and self-initiated projects maintained on GitHub (see profile above).
- **Languages:** Nepali (Native), English (Fluent), Hindi (Conversational), Bhojpuri (Conversational).
